

## Texture walk: how place feels

The simple act of taking a walk—a walk with a curricular focus or purpose—can have wonderful educational impacts. This series of imagination and inquiry-focused walks is designed to alert children to different aspects of the local natural world, as well as challenging teachers to re-imagine how they teach.

### Step 1

For this activity begin in the classroom with a class brainstorm about ways to describe how things feel to the touch—smooth, bumpy, prickly, hot, cold etc. In groups students might be challenged to come up with as many adjectives as they can. Perhaps assign this task ahead of time—*kudos* to the student who comes up with the most unusual adjective!

### Step 2

Once a list has been created you can ask students to head outside to explore. Take your class on a texture walk around the school grounds, local green space or any outside environment. There are textures everywhere!

### The challenge

Their challenge is to find something that matches each descriptor on the list. They can record what they find that matches the adjective. Also encourage them to bring back an item to show the rest of the class.

### Wrap up

Give students an opportunity to share what they found. Encourage them to classify some of the textures. For example, which were pleasing? Surprising? Curious? Unusual? They can identify additional categories.

This lesson is perfect for **ages xxxxxx**. It can contribute to learning objectives in English, science, arts or other subjects. You can extend the learning through tasks in creative writing, art projects and flora/fauna identification.
